

RapidLearn™ Client Testimonials

Nuffield Hospitals

Having searched and investigated at considerable length to a training module that was relevant to all staff, and both cost and time-effective, the e-learning programme from Access Academy is by far the best option of those I examined.

It means that staff are easily enrolled and can access the web-based programme from their normal work area, meaning time isn't taken out of the department for training – it can be done in the odd 10 minutes here and there, or all in one go. The whole course including the test takes about 30 minutes to complete, and requires no prior IT skills to do so.

Enrolment and management of the system is done by the training co-ordinator in the hospital and is simplicity itself. Training history is easily accessed to monitor compliance and maintain accurate, contemporaneous records.

This training module is the most cost effective per head that I was able to find, particularly when considering that no mandatory study time needs to be funded in order to do it.

Sharon Pryke, Clinical Governance & Training Manager, Nuffield Hospital Ipswich.

Atisreal

After investigating a number of organisations offering e learning based solutions we chose AccessAcademy as our supplier because their RapidLearn™ service offered us the best value. With a one off, up front cost, high levels of instructional design expertise and most importantly their capability to convert our existing paper based training content into high quality elearning content in a matter of days not months they were our suppliers of choice.

As we have 13 sites based across the UK the ability to train employees based at different sites simultaneously has created a definite benefit. This new approach has also enabled us to make significant savings in the costs associated with travel and time to train new employees on our IT systems, added Wade. Before introducing RapidLearn we would have sent a trainer to provide IT training on site and with the increased staffing levels and company locations within the organisation this could potentially have delayed new starters from being fully functional in their roles.

Richard Wade, Learning and Development, Atisreal

Solgar Vitamins and Herb

We wanted to develop a web-based system to deliver an existing paper-based correspondence training course to our customers around the UK. The team at Access Academy took the time to understand our specific needs and requirements and delivered a working prototype of our training course based on their RapidLearn software. The service has been fast and efficient, but most importantly the solution provided fits in with our requirements perfectly.

Paul Chamberlain, Technical Director, Solgar Vitamins and Herb, UK
