Innovative Workforce Optimisation Solutions from AccessAcademy

**Working with market leading partners in e-learning and content provision
AccessAcademy develops innovative and user-friendly solutions to support
workforce optimisation.**

As a result of globalisation it is becoming increasingly difficult for employers to manage the effective delivery of training and development of their workforce. Over time this may have a negative effect on overall business performance and jeopardise an organisations long term success.

The PathFinder™ System overcomes these issues and provides a total management and delivery solution for all workforce learning and development. The standardisation of key data is one of the key attributes of the system which is invaluable in geographically dispersed and disparate organisations – especially if they have regulatory compliance and reporting responsibilities. PathFinder streamlines the mandatory reporting requirements of organisations within industry sectors such as local authorities, pharmaceutical, regulatory and construction.

Chris Queen, Head of Technical Training for the NHS Hillingdon Community says, "The installation of the PathFinder system will create a single data source for all HR, Learning & Development and contact-related information for every NHS worker at Hillingdon which will streamline data gathering to meet our reporting requirements for CNST and A4C. Another key objective is to give all staff access to current NHS information enabling them to be more effective in their roles and PathFinder will help us to achieve this."

The **PathFinderRealTime Reporting** module automates tedious HR and training tasks such as professional registration renewals. The instant reports function enables line managers and supervisors to closely monitor and manage key training areas such as health and safety much more effectively as they can instantly see who has and has not been trained. It allows key issues such as “did not attend training course” to be identified and automatically followed up. Organisations can develop effective blended learning solutions using **PathFinderVLE** and **RapidLearn** ensuring that all staff, including home workers, receive the training they need to perform their role efficiently.

AccessAcademy Managing Director, Christian Greenshaw says “We will continue to extend our range of innovative solutions in line with customer demands and the requirements of the industry sectors we operate in. The use of rich internet applications to support learning and development is the way forward for businesses who want to stay competitive and optimise their investment in their key asset – their people.”
